Widget Baiting

Hits: 643

Description: Define: widgetbaiting

Widget Baiting is to construct content with the aim of luring search engine spiders to your widget pages, on your widget site enabling a quality of content to be indexed that if written manually would not deliver a meaningful return on investment.

Widget baiting is commonly used by search engine spammers in conjunction with cloaking, although has been known to reduce the time in constructing quality content for real people to read as well.
