# Site Skinner

Hits: 793

**Description:** More and more software can be skinned. Skinning is the process of adding your own colours, images, and style to a program. Now sites can be skinned too! Coming soon, you'll be able to download and install SiteSkinner, and web site design will never be the same!

Next time you do an overhaul to your site design, why not make it simple by using Site Skinner? Easily change graphics, layout, headers, footers, colours, and more with this amazing script.

Instead of deleting an old look, simply add a new skin to replace the old one. Users can choose the style of site they prefer from your 'skin-me' page.

## Resource Specifications
