**Description:** FutureSQL is a Free, Open Source Rapid Application Development web database administration tool, written in Perl, using MySQL, DBI:DBD and CGI.pm. FutureSQL allows one to easily setup config files to view, edit, delete and otherwise process records from a MySQL database. It uses a data dictionary, configuration files and templates, and allows "pre-processing" and "post-processing" on both fields, records and operations. v2.2 includes many new improvements including session ids and secure login.
