EPIG 2

Hits: 16,581

Description: Do you want to publish your photos on the web in no time? With EPIG, you can do just that. All you need is web space to host your EPIG album with PHP & GD support. Simply upload the EPIG files on the same folder where your photos are and you are done! EPIG displays an image gallery with automatically generated thumbnails for all the image files (supports JPEG, GIF and PNG files). List of new features included in EPIG 2: * Automatically generated thumbnails * Page-by-page navigation * Page number navigation * Three presentation styles * Custom thumbnail dimensions * Custom preview Image dimensions * Custom image quality * Display a description and/or filename for each image * Sort your gallery by filename or date in either ascending or descending order * Custom number of thumbnail rows & columns in each page * NO Database is required. Only a webserver with PHP and GD installed * Page template for easy integration with the rest of your web site

Simple and Easy Install, May 25th, 2005

Reviewed By: mcotten

This photo gallery script was very easy to install and the script itself is very light but had what I needed. The template was very easy to customize to have the look and feel of the website I was integrating it with. The auto generation of the thumbs is also very nice and will save my client time when adding images to his photo gallery. I also liked that there was no need for a database and no unnecessary features to deal with. I wish all the scripts I have used were this easy to use.
