Email To Phone

Hits: 2,342

Description: EmailToPhone is a free software for accessing email by any telephone and for sending phone alert when important email arrives. It is based on Voicent Gateway from Voicent Communications. The software currently supports POP3 and IMAP. Email message is read over the phone by Voicent Gateway's text to speech capability. You can listen, delete, or reply to a message by spoken commands. Reply message is sent as a .wav attachment. When the address (from/to) of a new email matches the ones you specified, an alert phone call is made automatically. The alert feature requires non-shareware version of the Gateway.
