dotCMS 1.6.5 web CMS

Hits: 5,808

Description: dotCMS is an open source, J2EE Web Content Management System (CMS) that includes a number of CRM-like features that many proprietary CMS solutions do not. dotCMS is extremely easy for both users and developers to work with- any number of new applications can be built within its framework. It offers features such as:

- * Virtual Hosting
- * Full Starter site
- * Web 2.0 Calendar
- * Custom content types
- * Site wide Templating
- * Object Level Permissions
- * Clustering Support
- * Widgets and Macros (photo galleries, video players, mp3 players, image resizer, thumbnail generator, file repositories)
