RSS Fetch

Hits: 9,348

Description: An RSS 2.0/0.91 feed parser. This PHP4 Class greatly simplifies displaying RSS data on your webpage. It parses any valid RSS feed with <item> tags and allows you to customize the data on your webpage. It will cache feeds and update them however often you say. HTML templates allow you to include your own html code and include any tags the RSS feed contains using a custom #{tagname} variable.

Numerous examples available.

Good with limitations, May 22nd, 2006

Reviewed By: rrwh_au

This script does exactly what it says it does - allows you to grab an RSS feed and embed it into a web page - BUT it does have one serious limitation - the URL to the rss feed cannot contain variables such as `index.php?x=rss` - it will simply fail. If this worked, I would rate it a full 5 stars. I hope to see an updated version sometime.
