AJ PPC

Hits: 2,141

Description: AJPPC is a fully functional (an another type of pay per click) script! With full administration controls, users need no programming experience to change many site features. It is a complete web application developed using PHP with MYSQL as back-end. Full developer API allows for endless possibilities and use in your own project! PPC Search engine is PHP and MySQL based software. So it is fast and easy to use and install. PPC search engine can be easily installed using installer script Show banners in search results. Sites are only listed under keywords they have bid on, if site's member has enough money on his account. Clicks are counted, the visitor is redirected to that site instantly. Any new listing becomes active or a new listing is not active until admin approves it. It depends on option, that can be changed by admin at any time. Earn extra revenue by using affiliate search results
