My DataBook

Hits: 15,825

Description: My DataBook is a personal organizer/planner. Features include eMail reminders, calendar, journal, appointments, and contacts. The great thing about this script is that it is powerful, yet very simple. Anyone with a little php experience could make countless enhancements to the script. Download away!

*This great script was created by Toby over at theadminshop.com. He dropped the GPLd version to pursue a commercial script.

Using this program with Apache2Triad on Windows 2000, Apr 20th, 2006

Reviewed By: itgadmin

Program seems very nice, needs a built in Auth for novice windows users. The average windows user knows very little about password protecting a folder. After trying to install it and getting the famous auto_increment error that is through no fault of your own. Maybe when MySQL gets there stuff together this will make a fine application for windows users as well.
