vote.pl

Hits: 6,876

Description: Vote.pl is a small but fast perlscript, that saves the data of your votings and displays the results graphically. After the user has submitted the voting, vote.pl replaces the vote-form in your html-document with the results or displays an new page. In a separate html-file you can describe the style of the vote.pl-output. Main features include: Several Votings - vote.pl can process several votings in different html-documents, Prevent multiple votes from the same user using IP checking and/or cookie checking, Show result without voting: You can look at the result of the voting, even if you have not voted, Replace voting-form / display result in a new page - Now you can choose, whether the result is displayed in a new page or inserted instead of the voting-form in the old page.

Vote.pl does the trick!!, Jan 29th, 2004

Reviewed By: Deanna475

After spending what seemed like forever looking for a suitable multi-question voting script, I found it with Vote.pl. Easy to setup, clear instructions and example files to aid the CGI-challenged. You create your own HTML files, so you can use CSS and have complete control over how your survey and results will look. Entering the input variables for the form couldn't be easier. I highly recommend this script if you want a multi-question, radio button type survey.
