DSChat

Hits: 15,304

Description: DSChat is a simple php chat script that doesn't need mysql, user auth, or a daemon. It's admin panel lets you change things on-the-fly, and lets you kick users, yes, kick users, even without user auth! It's cookie system is perfect for going 'Away-From-Keyboard', and it's 'Dump' system allows you to refresh the chat's displayed text if it gets too crowded. Unlike many other PHP chat scripts, this one requires no java, javascript, perl, database, and it's free!

Resource Specifications

Version:	1.0
