Web Calendar

Hits: 20,865

Description: Add a dynamic events calendar to your website or intranet, manage and display daily, weekly or montly events. Simply click into specific days and navigate montly or yearly forwards and backwards. An MS Access, MSSQL or MySQL database is used as backend. Can either be password protected, or allow anyone to add/edit events. Multilanguage with autoselection. Easily configurable. Upcoming events display, yearly recursive events, like birthdays or national holidays edited once. Event email reminder. External configurable WYSIWYG event editor. Selectable event category filter. Montly or yearly calendar layout.

I used this on a Master Gardener web page. Many of us need to add events to the calender and most don't do well with complicated administration. This is very user friendly and was extremely easy to install and configure. Kudo's to this developer.
