Printer Friendly

Hits: 3,249

Description: The "Printer Friendly" version select the main content of your page, removing the menu, header graphics, advertising and foot content. The script performs the HTTP "get" method via the XMLHTTP object to retrieve the page to be printed. Using the XMLHTTP object instead of something like FSO means that the ASP page is actually executed and not just 'read' as a stream of characters. Assumes that your page has printable content within two comments.

The best I've seen, Feb 2nd, 2006

Reviewed By: HalinaGold

I've been looking around for a printer friendly page script and have tried a few. This one is the only one that just works perfectly and is extremely easy to use - as a matter of fact I know nothing about ASP - I just use Frontpage.

There was a slight problem with the script to begin with, but Livio fixed it within 24 hours, so excellent support too.
