Microsoft Power Point Helper

Hits: 1,970

Description: Dynamically change your slides during Point Power presentation. This tool lets you zoom any portion of screen or scroll bottom part of screen to top so that your viewers on the back can view the whole screen. With this tool during presentation, you do not need to worry about if your slides are too crowded for viewers to read. Besides, you needn't to make separate slides to zoom up diagram, formula, picture and etc. while design.

Resource Specifications
