Animal Crossing Code Project (PHP port) Hits: 3,694

Description: If you want to spice up your Animal Crossing site, or just want to add something special to your gaming site, you can add some fun, or perhaps spoil it for people with the Animal Crossing Code Project. It contains the PHP version of the Code Generator and Decoder, originally made in C++ by MooglyGuy. However, because MS-DOS is limited, this package can bring you more. It brings you the original features found in the original, plus some extended information in the Decoder, and a special Plus version for both programs, which also give you a visual representation on how things could show up in the game. Last but not least, it also contains some small examples on how the generator can be used also.

Resource Specifications

Version:	1.2
Date Added:	Jun 21st, 2005
Last Updated:	Jun 22nd, 2005
Author:	Gary Kertopermono (original author MooglyGuy)
