Watch Weblog

Hits: 878

Description: WATCH WEBLOG - Apache log watching utility
Copyleft 2005 - Nathan E. Pralle

DESCRIPTION: This utility will allow you to watch, interactively, an Apache access_log for a website. It shows you the domain accessing, how many times they have done so, and what page or resource they are requesting. This utility accepts input from standard in (STDIN) so it is best coupled with 'tail'

It employs a DNS cache to enable faster lookups as well.

SYNTAX: tail -f location/to/access_log | watch_weblog.pl

REQUIRED: Perl Sockets (default install)

Resource Specifications

Version:	1.0
Platform(s):	linux
Date Added:	Jun 21st, 2005
Last Updated:	Jun 22nd, 2005
Author:	Nathan Pralle
