Ready E-Mailer

Hits: 2,535

Description: In these days, a way for visitors to contact you is a must. Many sites use simple forms that require programs like Outlook on the visitors computer to work - but not this script. Ready E-Mailer allows visitors to your site to send emails to you in one step. PHP and your sever will take care of all the rest. The script is as "Easy as pie" to set up, it should only take about a minute. The only thing you need to set is your email address.
