phpSitemapNG

Hits: 5,709

Description: phpSitemapNG creates a valid google sitemap that allows you to submit urls of your website at once to google. It can scan your filesystem and website for static and dynamic links and files, sets the appropriate values of the sitemap, writes the resulting sitemap and submit the sitemap to google.

The best in Sitemap PHP Software., Aug 21st, 2005

Reviewed By: benwiggy

I've used this software now through 3 of its releases, the improvements being fantastic every time. A really useful nifty bit of software, although also very CPU intensive, but perfect for Google Sitemaps and crammed with features!

Great Little Script, Sep 7th, 2005

We have been looking for the right sitemapper script and this is the perfect fit. Thank you. Good work.

It doesn't get any better than this for free software, Mar 30th, 2007

Those who know, know about Enarion. I don't even like to utter the real name in fear that my secret will spread.

PHPSiteMapNG is the best sitemapper out there. Robust, yet flexible. Good instructions and intuitive interface. Three versions, beginner (stable), intermediate (Beta), advanced (1.6.1b).

So whatever your skill level, this script is fun for all. Nice job.
