Dynamic-CD

Hits: 1,259

Description: Dynamic-CD provides the services you'd expect from an Internet server - except it's on a CD. Until now CDs could only display static HTML Pages. Dynamic-CD allows your CD to display dynamic content, just like an Internet server. Dynamic-CD allows you to produce CD's with processing power, adding an Internet server that runs straight from the CD. Put a database on your CD and generate HTML pages in real time. Catch and process Form and Query data with Dynamic-CD's scripting language. Protect sections of your CD with Dynamic-CD's encryption and password protection. For example : Store a catalog of products on the CD and process search queries. Users can select products, generate an order and email the order to you. For example : Password protect sections of the CD, allowing access only to those who have paid a license fee. For example : Download your ASP website to a CD and take it on the road. Sales staff can show off your company website without the problems of Internet access and connection delays.

Resource Specifications
