Good intention poor result, Mar 6th, 2007

Reviewed By: [guidoeffe](#)

This php application is good for intention but don't have good result a lot of bugs(It's commercial!). I talking about version 2.0.

The code is encrypted and you don't make any debug never translate in any language. It should be better as opensouce: in this way other people can contribute to this good idea.
