Alain's Webcounter

Hits: 4,524

Description: This webcounter can work as a (javascript based) text counter or as a simple graphical counter. When working as a graphical counter, digit appearance can be configured. It is possible to manage multiple counters by placing counter.cgi scripts in several directories. Specially designed for multiuser sites: a site-wide counter.pl file can be reused by multiple users by "require"ing it in their own counter.cgi files.
