After going through the DEMO I decided to download the evaluation version and give it a try. I thought that if it worked fine than I would suggest my company to buy this package and install it as our Project Management Utility.

However, after spending couple of days and trying to figure out how to install this on my IIS Server, it has been one of the most furstrating experience of my life. I installed successfully the PHP, MySQL, GD and then the real problem begins with PEAR.

Installation is relatively easy, Oct 13th, 2007

I used 32 minutes from starting to download until I had it installed, and that includes finding the installation instructions, uploading, creating database tables aso. I typed wrong in config file, if not it would take less time. I do not agree with the user that complained. I am not a super user, only basic skills in FTP, MySQL, PHP. Really excellent script with nice GUI
