# Fileloader

Hits: 3,729

**Description:** Fileloader is download manager wich let you control the files your customers can download. This script can be used for several purposes. For example:

- \* You sell different kinds of commercial scripts. This script let the customers just download the scripts they have payed for.
- \* You run a administration office, with this script you can let the users download their reports online. Very simple, upload a document and chose the user who belongs the document. Just this user can access the file to download.
- \* Great to use for online invoices. Just upload the invoice, chose the right customer and you´re done!
