the hosting speed comparison project

Hits: 2,388

Description: Registered webmasters upload a 100kb file to their site and ask their own visitors to perform speed tests on their servers. The speed tests are offered to the visitors by a piece of HTML-code.

Because these webmasters specify which hosting company they use, we write all the speed test results to the database of hosting companies.

Users can see all kinds of ranks of the web hosting companies speeds.

Resource Specifications
