Description: A full-featured easily manageable virtual greeting card script. Easy Installation, visually appealing interface at both the user and administrative levels. Features include intelligent events calendar with support for user defined private events, recurring events and variable date holidays example: (Labor Day... first Monday in September, Thanksgiving... Fourth Thursday in November, Grandparent's day... first Sunday after Labor Day).

Sophisticated user registration/management system with address book support. Users may post-date cards and even select the time of day for delivery, add music, smilies and poetry to cards. Many, many more features including user image uploads...
