# Sciretech Image Manager

Hits: 30,975

**Description:** Sciretech Image Manager is a professional image gallery using PHP and MySQL. It supports dynamic resizing and individual handling of images without changing the original image. It supports thumbnails and watermark to protect your images. You can use text and images to produce watermarks (image to image or text to image with own true type fonts). You can offer file hosting, file sharing, uploading, downloading and managing files on a web server or the intranet for your users, your business partners, your customers, your community or just to manage your private files. It comes with huge functionality, a control panel an user panel, you can manage upload/download- traffic and volume contingent for the whole system, for each group and for each user, you can manage payable user accounts and file selling using PayPal as payment interface, you can setup security features, a firewall, themes and content, business settings, mass up- and downloads and much more besides.

### **Professional and easy**, Aug 6th, 2005

Reviewed By: maintune

This is a professional image gallery script, but still easy to use. It has all necessary features a image gallery can offer. And most important, it's secure. Also check out their other projects.

### **A really good Image Gallery**, Aug 6th, 2005

Reviewed By: steve-majer

This is really a good Image Gallery which fits all my needs. Whether you want to have a complex and secure image-management with a lot of Users, or if you have a private image-management - it's perfect.

### **A time-saving image gallery**, Sep 10th, 2005

Since I use another script from these developers, I've come attentive to Quasars Images.

This image gallery has multiple and important features, which make this script a mighty tool not only for private persons.

You have detailed watermark functions, which makes you able to protect your images with a copyright or whatever.

It's handling is so easy, although it comes with so many features. It has a setup wizard and you can run the application within seconds. It looks very stylish and you have multiple settings, which surely will fit your needs.

### **Stylish and useful**, Oct 24th, 2005

One of my goals while searching an image gallery was, to have a scalable Script which's layout I can customize easily because I need to offer this Service for our customers. With Quasars Images I'm now able to do this in the easiest way ever. I can edit the layout and save it as a theme. Whenever I want, I can switch between the layouts to provide multiple looks and feels. Besides of that feature it has everything an image gallery can offer.

### **One more great image gallery**, Oct 24th, 2005

Reviewed By: kasper-vanro

Since I knew that they offer an image gallery too, I've tested it and don't want to miss it anymore. I need to share my images using my webspace and use Quasars Images, because it dynamically creates the Thumbnails out of the original Images, which safes a lot of space on the webserver. It has a lot of administrative features, and is very secure.

### **One of the best Image galleries I've seen**, Nov 6th, 2005

Reviewed By: marc\_hill

This is one of the best Image Galleris I have seen. Most of the Image Galleries i tried are full of bugs or even don't work on my hardware. When I tried Quasars Images, everything went within seconds and the Setup was more than easy. Just edit some settings and well, here we go. It is a very clean looking Script and offers me a lot of individual settings. Finally a Script keeping me and my work flexible.

### **My compliment**, Nov 6th, 2005

Reviewed By: olberg

My compliment for a really well done image gallery system. It's very easy to use and it has very useful features which all will makes you able to run it as individual as you need it to do. Just great.

### **Great look, great functions**, May 24th, 2008

Reviewed By: mosis02

The most time-safing and well-working image-gallery I have ever used. I needed to offer my images non-public, I have clients which wanted to sell photographs. My clients users can offer content for payment and they can choose if they want to be paid by content or by payment interval or even both at the same time. Just a great and mighty software. Thanks for that.

**Not Free...**, Aug 1st, 2008

Reviewed By: WebTrooper

It's not free, it's a free trial. Also, it's encrypted so it will only run on the domain you provide before you can download it. I don't mind that it's a trial, but they should be honest and say so. Calling it free right up to the moment you try to download it is unethical at best. If you're looking for a free photo gallery, don't waste your time on this one.

**Ditto what WebTrooper wrote...**, Oct 11th, 2008

Reviewed By: wolfmund

I don't like being lied to, so I came back here to hotscripts to write this review. However, I see webtrooper already wrote my exact thoughts. If it's not free, they should say so. If you're looking for a free photo gallery, as I am, don't waste your time on this one. If you're looking for a commercial solution, there are plenty of far better scripts that cost a whole lot less, from honest developers. I'm giving this script a rating of 1 because there is no zero rating.
