Branded FTP Upload Utility

Hits: 669

Description: The Upload Utility is an application that may be branded with your company name. You may offer this application to your clients (both current and new) as an incentive to sign up with or use your services.

The Upload Utility adds a pair of items to the Windows Explorer context menu, allowing one-click uploading of files and folders to webspace via FTP.

The Upload Utility may also retrieve a custom message off your server that will automatically display in your client's upload dialog when they upload files. This is useful for notifying clients of server maintenance, new features, and more.

Resource Specifications
