PHP:Paging

Hits: 3,661

Description: PHP:Paging is a PHP component that will help you create paging easy and quickly. Creating good paging is often a big hassle, and you often have to use a lot of if-else statements or use difficult template language. PHP:Paging does this all for you, and all you need to do is write some simple HTML. With PHP:Paging you will be able to create simple or advanced paging within seconds. You will be able to link directly to certain pages, link to next pages, link to different 'perpage' links, and more. It's all explained in the manual.

Resource Specifications

Version:	1.0
