PHP REC...Exactly what I needed!, Jun 13th, 2006

Reviewed By: baldwin

I searched for days online to find the real estate listings script that I needed. This one had every feature that I was looking for and more all for about 1/4 of the price of comparable scripts. You control every aspect of the site (number of pictures, all category types, payment options, prices, etc.) all from the easy to use admin control panel. Don't waste your time with the other scripts out there, this one comes with all of the features that others consider optional. Great job DB Design!

Great Website and great service, Jun 28th, 2006

I bought the website few months ago and I found out that the service and coding has been perfect. The search system is the best I have seen so far. The service provided by the company is great too. All my problems were solved in a very short time frame and to make things better they also have a member forum where we all can get extra tips and tricks to make our experience great. Thank you for the Great website.

This program works very well and is priced very fair..., Jun 29th, 2006

This script is very powerful yet very user friendly. Technical support is excellent. Not only did they help me with installation issues, they also helped with modifications to the script. They have answered numerous questions with great advice and responded to my emails in an expeditious manner. I highly recommend this product.

I purchased this script expecting to have to make heavy modifications. I wanted to focus in on a specific real estate market, rather than the entire USA. The changes came easy with this well-design script. I download a lot of scripts, both for \$\$ and for free, and this is my first review. It works excellent and is easily modifiable with no nagging 'link-backs' to the author. Easily customizable for a radically new look and feel.

Good All Around, Feb 14th, 2007

Excellent Script. Easily modified if necessary. Author provides good support and was able to fix my issue within a few days. ALOT of bang for the buck- many extras like movie times, news and weather that make your site look really impressive. Had a minor issue with Zip code searching, but author fixed it. My first script that I ever purchased and i give it a big thumbs up! I did not use it for real estate, though -see the script in action: www.thaifood.com.

I can across this script a few days ago, and already have he site set up. It is attractive as it comes, though easy to customize, install and use. I would like to add that DB Design has been more than helpful in helping me personize some features. I would certainly recommend this script over many of the others I have tried.

... because this "out of the box, ready to go" script is anything but. You will need to know HTML at the very least to complete this web site. A broken link checker will be helpful so your site actually works. Not a bad script, so far, but no way is this suitable for the non-experienced, non-programmer person looking for a simple solution.
