## ampsig

Hits: 4,866

**Description:** ampsig is a free php package enabling you to publish a very high quality dynamic sig. uniquely, ampsig also shows your current progress in the song.. LIVE!

ampsig features..

Scheme support. you supply an image, optionally a font, and a few text preferences in a "scheme" file. You can have many schemes, specifying them with the calling URL.. "http://mydomain.com/amp. php/nicescheme.png" or even have ampsig create them randomly from your schemes folder. (you can specify the output format with the URL, too)

LIVE progress bar. this has to be seen to be appreciated..  
[http://ampsig.com/screens\\_hots.php](http://ampsig.com/screens_hots.php)

TrueType support (with a wealth of "tweaks" you can perform on them), Alpha transparency support (have your background show through, use odd-shaped images, or float your text in mid-air, whatever), built-in color layers (create a random background, or produce color overlays for your images) and much much more. (almost a hundred different visual settings can be specified in your scheme, or none, it's up to you)

ampsig outputs its images in png, jpeg or gif format.

ampsig can display information from a number of sources, generally utilising the services of standard "NowPlaying" type data clients. There are ampsig clients available for Windows (AMIP is best), Mac OS X (macsig) and Linux (signux).

All in all, if you are looking for a highly cool dynamic sig with oodles of features and infinite visual potential, there can be only one: ampsig.

And if you don't have a webserver handy, we can even host it for you!

### Resource Specifications

<b>Version:</b>	0.9.5
