ReadyPOP - FREE .Net POP3 Component Hits: 1,430

Description: ReadyPOP is a FREE .Net library for retrieving email messages from a POP3 mailserver, checking mailbox status and parsing retrieved messages from Visual Basic .Net, C# .Net, ASP .Net and other programming and scripting languages that support the .Net framework. It's extremely easy to use (No need to understand the POP3 protocol). You can access the UIDL (unique message ID), message Date (automatically converted to local time zone), From address, To address, CC address, Subject, Plain Text Body, HTML Body all by name. You can also easily return a list of file attachments without having to first save them, or have them automatically saved to the directory of your choice. Fully supports MIME, Base64 and Quoted Printable. Also includes a complete working ASP.net sample application that clearly demonstrates how to use the ReadyPOP .Net component.

Resource Specifications

Version:	3.0
