## Database Creator

Hits: 1,543

**Description:** You know how messy it is to login to cPanel then setup your databases, especially if you are not savvy with it all. Well no more. Now you can have Database Creator do it for you without going near cPanel. We created this standalone application specifically for non tech users that needed to quickly setup a database to run their scripts. We quickly realized the benefits to web hosting companies as an extra help to their clients. Try out the demo to see just how simple Database Creator is to us. You will be setting up databases in seconds!

### Resource Specifications
