# guestMap

Hits: 7,029

**Description:** guestMap is a PHP script that utilizes the Google Maps API and a MySQL database. It allows visitors to your website to click on a Google map and "mark" their location. This scripts is still very young and being actively developed.

guestMap is now on version 2.2. If you have downloaded it or are downloading it, please stop by my guestMap and "mark" it. If you leave your email address, I will set you email updates when changes come out.
