vText Java Applet

Hits: 3,317

Description: vText is a compact Java applet with a full featured text and image microbrowser. It allows a controlled visualization of hypertext contents embedded in your pages. You can get precise text composing in web pages, visualization of long contents in small areas, vertical scrollers (manual or automatic), news tickers with active links, menus and content navigators, image sliders and banners, dynamic message boards and many other special effects.
