## php form wizard

Hits: 3,681

**Description:** PHP Form Wizard is a powerful tool that creates a PHP script to process any web form, it makes all necessary validation, to check that your visitor had filled all values correctly, it can handle File uploads, send email to form owner with all fields data whenever the form is successfully processed and a personalized confirmation email to your visitor (auto responder) and store form data in a text file or in a Mysql database .

PHP-Form Wizard is a stand-alone application run on your PC, so there is no script configuration or editing required and you can save your project to work on latter whenever you change something in your web form , No need to enter any settings again. Using PHP-Form Wizard you can store submitted data in a flat text file or in a MySQL database.

Unlike many other similar tools the php scripts generated from PHP Form wizard is very secure against spammers. There is no limitation regarding number of file attachments per form
