Webcounter & Tracking

Hits: 849

Description: This webcounter is multipage capable and resolves IP addresses of visitors.

Your websites can reside anywhere on the internet.

(See 1.htm ... 4.htm as resembling examples).

When the visitor opens your page he activates

"3.cgi" (in the "v"-folder) which accesses v.cgi !

v.cgi can extract publicly available IP information(location) as well it counts your single pages.The hits are recorded in count1.txt to be processed for accumulating additional information the hits are finally stored in a readable form in "count2.txt".

check.cgi uses count2.txt and enables you to see all hits in a webbrowser. In order for you to run the scripts, you should replace "home.tv/cgi-bin" with the domain name you are going to use. You may ask your webhost-provider. It is always convenient if you can test the software on your own computer. For this purpose the scripts may reside in: "http://localhost/cgi-bin /v ".

For information of how to install a webserver, see [arieba.net/icu/mys](http://arieba.net/icu/mysql_apache_php)
ql_apache_php

Resource Specifications
