IIS_ipblock

Hits: 2,516

Description: This script was written to help stop automated brute force attacks against your website. Are you tired of seeing www.yourdomain.com... ..cmd.exe in your log files? This script uses a custom 404 page that logs the IP address of the person making the 404 requests and after so many requests it adds that IP to the IIS servers deny list. There is some HOWTO information with the download...Be sure to read the README.html file! This script works against requests made via browser, wget, raw HTTP...maybe more. I updated this script to use a safe.log. You can add Ip's you dont want to ban in the safe log. IP's you might not want to ban are those used by Googlebot or Slurp (yahoo bot).
