Traffic redirector php script

Hits: 1,590

Description: - How can you use this script?

You can use this script for traffic reseller site service and resell traffic from your domains to your customers, or you can redirect traffic from your domains to your other domains. Two basic purposes: for traffic reseller service site and for redirecting/gather traffic for your own web sites.

- How does it work?

Example: You have 15 domains that are hosted but not doing anything with them. This domains get traffic or you purchased newly expired domains that get traffic. You then put a small part of script code on each of those domains that you do not use but need traffic from them. Now people go to your site and join the traffic redirector script, they purchase some impressions using any system you want to use for payments. You approve their url to be placed in the rotation and add them credits.
