Pivo Ping Component

Hits: 1,489

Description: Pivo.Ping allows you to effortlessly enable your applications to send Internet Control Message Protocol (Ping/ICMP) packets in .NET. Programmatically ping a remote server, host, route, or any network device to see if it is up. Pivo.Ping fully supports RFC 792 standard. Pivo.Ping is a server component. It requires the Microsoft .NET runtime in order to function properly. Pivo.Ping is used to programmatically ping hosts on a network. A 'Ping' is a technique for sending an ICMP (Internet Control Message Protocol) packet(s) to a remote host. If the remote host is up, and supports ICMP, a control message, or packet, will be sent back to the sender. This technique provides a mechanism for feedback about communication problems in a networked environment. Pivo.Ping abstracts this mechanism in an easy to use manner for the programmer.

Resource Specifications

Version:	1.01
Platform(s):	linux, windows
Date Added:	Oct 25th, 2005
Last Updated:	Oct 25th, 2005
Author:	Pivo Corporation

Average Visitor Rating:  **0.00** (out of 5)
