# Salt & Pepper Encrypter

Hits: 2,884

**Description:** Salt & Pepper Encrypter is a collection of two PHP functions that will make your password storage more secure! Instead of using just a common hash function, it uses a combination of them along with its own algorithm!

For example, lets say you have a password of test. You want to securely store this password in your database, but still be able to authenticate the user. With Salt & Pepper Encrypter, your password could be saved in the database a number of ways such as:

- a94a8fe5ccb19ba61c4c0873d 39190dd6f7670f0cca44cb9d3c8e7df65ee93307273e987982 fbbd3n28
- a94a8fe5ccb19ba61c4c0873d 96669b01b6f24c7294f2f442c2ce0de9391e987982fbbd3b25

By having such a variable way of storing data you are circumventing hackers from comprimising your data. After storing this in the database, you can check the user's inputted password for correctness as well.

## Resource Specifications

<b>Version:</b>	1.0
<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Date Added:</b>	Oct 25th, 2005
<b>Last Updated:</b>	Oct 25th, 2005
<b>Author:</b>	Nathan Bolender
