Online Web Messaging System

Hits: 15,228

Description: Use secure messaging to send and receive messages from a alternative web-based mail system. Using the secure messaging system no actual mail is transmitted through any 3rd party servers. Only an optional message notice is sent to the recipient, the user needs to visit the site in order to read the message. Normal SMTP mail can hit multiple servers and can possibly be read, stored, or changed anywhere within the process. Setup secure messaging on an SSL enabled website to enhance the privacy even more.

this script don't work, don't have support team and don't have docs. The official page of the script don't say anything that can help the users, like me.
