eggBlog

Hits: 25,029

Description: eggBlog is the free php & mysql blog software package, allowing you to create your own online website, journal or weblog (blog) using your own web-space.

Powered by PHP and MySQL, eggBlog has a wide range of features including:

- easy to use web-based administration & configuration
- WYSIWYG easy-to-use text editor for publishing or editing news articles
- download themes to easily change the style, layout and colours of your site
- download additional language files (where available)
- optional forum to allow discussion
- optional comments on news articles to allow feedback on announcements
- optional sticky articles that remain fixed on all pages
- optional tags/categories on articles
- registered users allowed to leave comments on news articles
- registered users allowed to post messages in the forum
- automatic archiving of all news articles
- valid XML RSS 1.0 feeds for both articles and forum topics

How can this be free? It has a brilliant administration area making it so easy to add new blogs, add comments, start forums, reply to forum posts, add photos, create photo albums, link to RSS/XML feeds ... truly brilliant.
