TStarGallery (PHP Gallery script)

Hits: 3,632

Description: When the scripts is started, it will read the current directory, take all JPG/PNG/GIF files, make thumbnail files of them (if thumbs do not already exist) and display the thumbs with a link to the "original" picture.
That's it... So it's basically an "engine", made to show you how easy a gallery script can be made!

Resource Specifications

Version:	1.0
