# MWGuest

Hits: 2,493

**Description:** I was fed up looking for a free script that provided admin approval, since my own guestbooks were being Spammed constantly, so I decided to write my own!

This latest version of MWGuest is a simple, easy to set up guestbook for your site, written in PHP and using MySQL, letting people leave comments about their visit that can only be viewed once they are approved by you. A verification code can be used at time of posting to prevent some Spammers and you can now set the length of time between each posting from the same person to prevent hammering.

Now added is the ability to use bulleting board code and smilies and be able to rate the site.

Separate header, footer, template and css files make it all the easier for you to integrate MWGuest into your site.

## Resource Specifications
