Quicksilver Forums

Hits: 11,946

Description: Quicksilver Forums is a fast, feature rich bulletin board system written in PHP and MySQL. It is fully object oriented and optimized for speed, ease of use, and easy modifications. QSF checks all inputs through a common interface which drastically reduces the chances of exploitable bugs. Powerful and flexible skinning engine makes giving your board a new look very simple. Advanced permissions system allows for fine grained group and user permissions. Based on the popular MercuryBoard software.

A great forum soft, Nov 19th, 2005

Reviewed By: LadyAnna

I have during my search of a good forum software looked at a few of the ones present. I have come to like and use this one, it is a easy to setup and handle forum. It has many good features, such as creating groups and giving them access to special areas by that, or for that matter limiting their access using groups. You can also add in more feature, as time goes on I'm sure there will be many addons that you can get from their site, its built to be able to handle inserting of new modules.

Great forum software, Nov 19th, 2005

Reviewed By: gnutux

Well, all I can say is that this forum software is so fast that I thought I was loading a plain HTML page. This forum software is built on top of MercuryBoard technology which was the fastest forum software in the world. They have a great community, support and a great resource site called Planet QSF. This forum software is definitely faster than Invision Power Board, Ikonboard, PHPBB and other famous forum software. It's also easier to mod or skin with than the ones listed above.

An Amazing Board, Nov 23rd, 2005

Reviewed By: veryanoyed

This board is brilliant to use for company or personal use. It has been built for speed and will blow you away with its 3D permission system. A modlet system has been added so you can easily write MODs that other people can use if the wish. This is a brilliant board and I have used it for the last three years, so it must be good!!!
