The Verbosifier

Hits: 1,601

Description: The Verbosifier provides advanced features not available in other software while being simple to configure. Spamguard Extra provides intelligent spam protection by checking for blacklisted terms in URLs. The easy HTML-based template system lets you customise the look of the software from the look of the input form to the display of each entry with two sample designs provided with the program. You can decide how you want the date to be formatted, the number of entries to display, even whether or want to keep old entries or delete old ones as they get pushed off the page. The Verbosifier also remembers the information of users so they can get to commenting instead of filling out fields. The Verbosifier comes well-documented to make it easy to install and extend even further.

Resource Specifications

Version:	v1.1 Functionality
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Nov 26th, 2005
Last Updated:	Nov 26th, 2005
Author:	Desi Quintans

Average Visitor Rating:  **0.00** (out of 5)

Number of Ratings: 0 Votes

Average Member Rating:  **0.00** (out of 5)
