Broadfast - powerful newsletter and broadcast

Hits: 2,153

Description: This script allows the webmaster to manage, add, edit or export/import member's databases which to receive the newsletters. It allows easy creation of the newsletter content, storing the newsletters for further editing, immediate sending or sending as delayed cron job. It is compatible with various server limits and can implement delay between the mails and have limit for mails per hour.

New in Version 1.1: Double opt-in (optional) and tracking how many receivers have actually read the newsletter

New in Version 1.2: Allows testing the newsletters to one selected email address

The script allows easy integration with any other member's database. It also has an online registration module.
