AXML Record Browsing

Hits: 3,025

Description: AXML Record Browsing is a ASP component that allows you to display or modify your database tables or queries with no coding at all. Insert or publish new table records from Access, MS SQL, Oracle, Sybase or any other ADO enabled database. User can sort on any column, page through the recordset or go to detailed form page. AXML Record Browsing allows you to select appearance, apply formatting or regular expression functions to data, CVS export and much more.
