Status2k - E-Mail Alerts, Bandwidth Monitoring & More!

Hits: 5,782

Description: Server Status 2k is a PHP script designed to display your server stats in an easy to understand format, this means your current and future clients can see how your web server is performing.

But the script is not limited to just clients, its also a valuable tool for administrators. The administration page displays a number of useful system stats such as logs, port connections, users logged into SSH and more! And if that's not enough the whole admin page is in real time meaning you can see how many connections there are to HTTP, SSH, POP3, MySQL, at that point in time as well as the top processes.

A Very nice script, Apr 8th, 2007

Reviewed By: Mortekai

I have been using Status2k for a while now and I am very pleased with it. Not only does it provide information about the server that is much appreciated by the customers, but it also comes with some very handy admin tools. Best of all for a design freak like me is that its easy to customize to fit any design.

I Give Status2k 2 thumbs up and a solid rating of 5.
