JV2 Folder Gallery

Hits: 9,821

Description: Does not use any databases - simply scans all the folders and generates galleries with automatic cached thumbnails as well medium sized images before opening fullsize popup (depending on the options you choose). You can drop files and folders to gallery via FTP or create and delete folders and upload individual images or many as zip. Excellent support for including the gallery directly in your code. Options to use htaccess and mod_rewrite for friendlier URLs. Tested on apache (nix/win) - Reported to work on IIS more info, current release and instructions on website gallery supports javascript effect scripts like lightbox2 and highslide

Resource Specifications
